## Features

- Receives real-time inbound FIX trade execution reports received from third-party platforms

- Performs Atomic Exchange of value on the Layer-2 custodial blockchain ledgers

- Real-time multilateral netting between counterparties with instant clearing and settlement

- Periodic net settlement movements are automated at the custodial level

## Benefits

- Provides real-time clearing and settlement for trades executed on third-party platforms

- No bilateral credit and no bilateral net settlement movements

- No central counterparty and no prime broker credit required

- Atomic Exchange on Layer-2 custodial blockchain ledgers provides an alternative to credit intermediation
