

# Cross-Custodian Net Settlement

Trade from your custodian with counterparties at any other custodian with multi-lateral netting and automated net settlement movements custodian-to-custodian, including Fiat and Crypto residuals transferred via Layer-1 Smart Contracts

[Schedule a Demo](#)

## Features

- Calculates net settlement amounts due for all cross-custodian trading and payment transactions of clients at different custodians
- Automated workflows for Atomic Exchange of net settlement amounts due custodian-to-custodian
- Netted quantities that don't need to move are burned and reallocated atomically on custodial Layer-2 blockchain ledgers
- Residual quantities that need to move are programmatically loaded into Layer-1 Smart Contracts and atomically exchanged
- Automated Fiat handling to facilitate programmatic movement of Fiat over Layer-1 public ledger between custodians
- Allocation reports for programmatic application of amounts due and audit trail

## Benefits

- Facilitates trading between clients at any custodians with clients at any other custodians
- Facilitates payments between clients at different custodians with netted physical delivery
- Riskless Atomic Exchange between clients at different custodians without AML/KYC barriers
- Custodians retain clients and assets under custody but facilitate open trading and payments with clients of other approved regulated custodians
- Revolving stablecoin issuance and redemption facility couples instant Layer-2 payments of Fiat and Crypto between custodians and stablecoin issuers with Layer-1 issuance and delivery
